Head of Rev Tech and Tools

Description

The Head of Rev Tech & Tools owns the revenue technology roadmap and ensures seamless, secure, and value-driving systems across the GTM lifecycle. This leader maximizes adoption and ROI of CRM, marketing automation, CPQ, CDP, BI, and customer success platforms by aligning configuration to user workflows, integrating data flows, and managing vendors for performance and cost. The role requires a consistent focus on delivering a best-in-class Seller / User experience that is fully integrated with reliable technology.

Reporting to the Head of RevOps, this leader partners closely with Sales, Marketing, Customer Success, Finance, Product, Channel Partners, and IT.

Responsibilities

- Build and maintain a RevTech stack to drive seller productivity and improve the sales rep experience; ensure a seamless Seller / User experience delivered with reliable tech
- Define the RevTech strategy and multi-year roadmap aligned to GTM priorities and user needs
- Lead vendor selection, licensing, and budget management; optimize total cost of ownership and consolidate platforms where appropriate
- Ensure integrations and data synchronization across systems; partner with Analytics on the GTM data model and governance
- Design configurations that simplify seller and CSM workflows and embed guidance in the flow of work
- Establish change management, enablement, and in-app training programs to drive adoption
- Implement robust security, permissions, and compliance controls in partnership with IT and Security
- Measure feature adoption and business outcomes; iterate the roadmap based on usage and feedback

Qualifications

- 10+ years leading enterprise applications for Sales/Marketing/CS; proven success driving adoption and ROI across HCM and B2B sales environments
- Strong product mindset and user-centered design orientation; experience translating field needs and AI into system design
- Program and vendor management excellence, including budgeting and contract negotiations
- Solid understanding of integrations, data architecture, and security/compliance considerations
- Change leadership and enablement experience to support deployment at scale
